GAUTIER Guillaume

Senior Full-Stack Engineer & AI Workflow Advisor

Paris, France · Full remote

gg-xeewi@pm.me
gautierg
xeewi

Full-stack engineer with 10+ years of experience, specialised in front-end (React, TypeScript) with solid back-end and infrastructure practice (NestJS, Node, AWS, Scaleway).

Twice CTO, building products from zero to production and leading teams of up to 10. As a senior engineer, I'm brought in to clean up, structure and scale existing codebases: legacy audits, monorepo migrations, design system consolidation.

I integrate agentic AI tooling (Claude Code, custom agents) into team workflows and train developers to use it well.

Past experiences

Believe - Senior Full-Stack & AI Workflow (Freelance)

2026 @ Full Remote

ReactJs - TypeScript - Nx monorepo - Module Federation

- Senior engineer on Believe's analytics product (streams, audience, platform breakdowns) used daily by artists and labels: one of the company's oldest applications, under modernisation for years. Team of 4 developers.
- Audited the legacy codebase, decided what to keep and what to retire, and cleaned it up to prepare the next phase of the rewrite.
- Led the migration of the app into the cross-team Nx monorepo (Module Federation) to share components and tooling with other teams — core mission of the contract.
- Defined front-end development conventions (disabled vs hidden actions, empty states, error handling) to replace ad-hoc practices and bring UX consistency to a team without a dedicated designer.
- Designed and ran training sessions for the team: clean code, generative AI, agentic AI tooling, designer–developer collaboration.
- Built agents for the team and worked with Believe's internal AI enablement team to roll out shared tooling.

Sunday - Senior Frontend Engineer (Freelance)

2025 @ Full Remote

ReactJs - TypeScript

- Consolidated three parallel design system iterations into one: audited what existed, decided what to keep, refactored and removed the rest.
- Built *La Bonne App*, the white-label app for Groupe Bertrand, on top of Sunday's existing architecture and design system — maximising reuse instead of rebuilding features.
- Worked closely with product teams to prioritise and shape features.
- Trained junior developers on AI dev tooling to bring the whole team to the same level.
- Raised code quality: test coverage, consistency, maintainability.

Lola Health - Chief Technology Officer (first employee)

2022 - 2025 @ Full Remote

ReactJs - React Native - NestJS - TypeScript - Scaleway - OpenAI + vector DB

- Joined a company that was then only an insurance offer, as first employee and CTO, to build the entire tech stack from scratch. Three years: 50+ client companies, 300+ daily users.
- Designed and shipped the full product suite: internal back-office for contract management, B2B platform for client companies (employee onboarding/offboarding, contracts, coverage, HR data), the end-user app (the most used product), marketing websites, and later an individual-contract offer.
- Built a shared front-end monorepo and design system, letting each new platform ship fast on a common base.
- Shipped an in-house AI assistant (OpenAI + vector database over the insurance contracts) so users can ask about their coverage and reimbursements in plain language.
- Node/NestJS APIs hosted on Scaleway to keep health data in France; integrations with insurers' legacy systems and formats.
- Grew and led the tech & product team up to ~10 people (developers, designers, product); worked daily with the CEO and COO on priorities.

GAUTIER Guillaume — Senior Full-Stack Engineer & AI Workflow Advisor gg-xeewi@pm.me

Travel retail

Travel retail scheduling platform - Lead Developer (Freelance)

2019 - 2020 @ Full Remote

ReactJs - React Native - Python / Django

- Built, for a travel retail company, an internal workforce scheduling platform replacing manual planning: 1,000+ schedules across ~10 airports worldwide, with terminals, access badges and shift constraints.
- Web back-office plus a mobile app for staff to manage their own schedules.
- Over a year of development; stopped when Covid shut down the travel retail market.

Chronogolf (Lightspeed) - Frontend Engineer

2018 - 2019 @ Montreal, Canada

Angular - ReactJS - VanillaJS - Chrome extensions

- Feature development and bug fixing on the booking platform, including the golf cart reservation feature.
- Integration work with partner companies, notably Lightspeed (which later acquired Chronogolf): found ways to embed their features into ours while respecting both security models.
- Chrome extensions and vanilla JS to work around third-party application constraints.

Seaver - Fullstack Engineer

2017 - 2018 @ Paris, France

AngularJS - NodeJS - ExpressJS - Cordova

- Joined when the equestrian data app had serious performance and scalability problems that made every new feature slow to ship.
- Led a year-long refactoring of the mobile app and rebuilt the backend and data architecture in parallel, in collaboration with the hardware team.
- Worked with designers to simplify a product users found too complex.

Deskover - Chief Technology Officer / Co-founder

2016 - 2018 @ Full Remote

AngularJS - NodeJS - ExpressJS - Cordova

- Co-founded a marketplace to rent a desk anywhere near you, in a company or at someone's home.
- Built the entire product: web applications and mobile app, including database and API architecture.

Skills

Front-end	React, TypeScript, React Native, design systems, Storybook, Angular
Architecture	Nx monorepos, Module Federation / micro-frontends, GraphQL, REST
Back-end	Node, NestJS, Express, Python / Django, PostgreSQL
Infra	AWS, Scaleway, CI/CD, Docker
AI tooling	Claude Code, custom agents, RAG (OpenAI + vector DB), developer training
Quality	Testing, code review, clean code, documentation
Languages	French (native), English (fluent)

Training & talks given

- Clean code and quality standards for product teams
- Generative AI and agentic AI tooling for developers — from first prompt to building agents
- Designer–developer collaboration
- Onboarding junior developers on AI dev tools
